

Working with Environments

```
mage init --name="My fantastic app" --email="notifications@my.app"
mage add environment --name="production" --enableReleases
mage list environments
mage lock to:production
mage unlock to:production
```

Deployment & Releases

```
mage deploy to:production
mage deploy to:production --branch=v2.3
mage deploy to:production --overrideRelease
mage releases list to:production
mage releases rollback --release=20120101172248 to:production
mage releases rollback --release=-1 to:production
mage releases rollback --release=0 to:production
```

Environment Config

```
# production environment
deployment:
  user: dummy
  from: ./
  to: /home/example.com
  excludes:
    - app/cache/*
    - web/bundles/*
  releases:
    enabled: true
    max: 10
    symlink: current
    directory: releases
  hosts:
    - 172.16.0.101
    - 172.16.0.102
    - 172.16.0.201:2222
  tasks:
    pre-deploy:
      - scm/update
    on-deploy:
      - symfony2/assets-install
    post-release:
      - purge-apc-cache
    post-deploy:
      - purge-varnish-cache
```

This is just the main list of commands and options,
for more detailed information and more commands,
please go to the online documentation.
